SUTURES
Since 1994

We Believe Quality is the Key to Success,

Orion Sutures (India) Pvt. Ltd. is engaged in the manufacture of entire range of sterilized **Absorbable and Non-Absorbable of Surgical Sutures & also Micro Sutures.**

Established in 1994, Orion Sutures (India) Pvt. Ltd. is Located in Bangalore (India). The firm is also licensed to manufacture sterile sutures by the Regulatory Authority in our country (India) under the Drugs & Cosmetics Act 1945, Holding state license Number : KTK/28/268/94 and CDSCO License Number : **MFG/MD/2021/000276.**

Established in the year 1994, we have gained a great name in the domain of manufacturing, supplying and exporting all kinds of sterile and non sterile Surgical Sutures. Our products are appreciated for their non-reactive nature, cost-effectiveness and great strength, owing to which these are highly demanded by our clients located worldwide. Our products are marketed under the brand **ORION SUTURES** and are diligently manufactured using the best raw materials at our state-of-the-art infrastructure. In order to ensure that only high quality products reach our clients, we conduct strict quality checks before their final dispatch. Furthermore we offer these in neutral packing that have increased their demand among our valuable clients. To facilitate our clients in the best possible manner, we offer the reliable OEM services.

We have always known that we manufacture the highest quality Sterile Suture products and in the SUTURE industry where quality is so important, we wanted another way to back up that claim. We are ISO9001:2015, ISO 13485:2016, WHO-GMP & CE Certified complying International quality standard accepted by the majority of the world. It speaks to all quality-related activities in an organization and helps ensure customer's needs are met and focus on quality in order to gain a competitive edge and to access global markets.

Orion Sutures (India) Pvt. Ltd.'s Specialties:

- World Class Manufacturing Facility with Class 10000 Production area and Class 100 Area QC meeting ISO 14644-1 requirements
- The manufacturing and testing is manned and Operated by ORION's Competent and Devoted Staff who are experienced and qualified staff duly approved by the Regulatory Authority. The Manufacturing and testing conforms to the requirements for surgical sutures as specified in the United States Pharmacopeia (USP).

NEEDLE TYPES

Orion surgical needles are manufactured from highest quality stainless steel grades for outstanding performance, combining high ductility and strong bending moment. Advanced silicon coating ensures smooth penetration and reduced tissue trauma. The shape of the needle body is designed in order to allow maximum stability in the needle holder.

5/8 CIRCLE

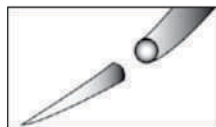

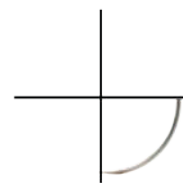

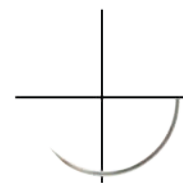

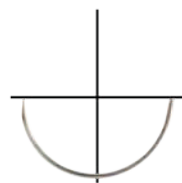

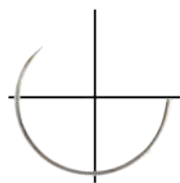

1/2 CIRCLE

3/8 CIRCLE

1/4 CIRCLE

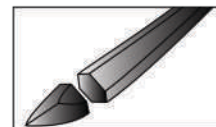

J-NEEDLE

STRAIGHT

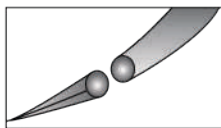

TAPER POINT

A gradual taper to a round bodied needle.

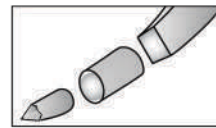

SIDE CUTTING SPATULA NEEDLES

Needle with cutting edges on the two sides.

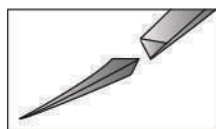

TAPERCUT POINT

Balanced, cutting point-tapering into a round bodied needle.

SOFT CUTTING POINT - CORONARY

A minute point followed by a round body and a rectangular main body for better penetration in cardiovascular surgery.

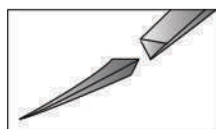

REVERSE CUTTING

A triangular body offers a third cutting edge on the outer convex curvature.

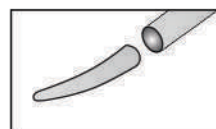

CONVENTIONAL CUTTING

A triangular body offers a third cutting edge on the inside concave curvature.

EASY PASS NEEDLE

Precision point with extra sharpening.

BLUNT NEEDLE

Cylindrical bodied needle with a rounded point. For soft tissue such as in liver and kidneys. Reduced risk of needle stick injuries.

OUR CERTIFICATIONS

OUR CERTIFICATIONS

ORYL / ORICRYL (Polyglycolic Acid) is an ideal and time tested synthetic absorbable suture, widely used by surgeons. All over the world. PGA's superior features over catgut are predictable absorption, outstanding tensile strength, in-vivo inertness and excellent handling properties.

Type	: Braided and coated multifilament
Material	: 100% Polyglycolic acid
Color	: Violet
Tissue reaction	: Minimal
Absorption	: The hydrolytic action by which the material is broken down results in total absorption in approximately 60 to 90 days. Approximately 50% of tensile strength remains after 21 days.
Tensile Strength	: 75% tensile strength is retained for 14 days and 50% till 21 days.
USP Range	: 8/0 – 2
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point
Packing	: In aluminium foil packages with or without needle

CHARACTERISTICS

- ☒ High tensile strength
- ☒ Synthetic
- ☒ Breaks down by hydrolysis
- ☒ Braided structure
- ☒ Coated multifilament
- ☒ Hermetically sealed packing

BENEFITS

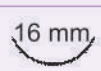

- Excellent tissue support
- Minimal tissue reaction
- Predictable absorption rate
- Excellent handling properties, High flexibility, High tensile strength, Excellent knot security
- Soft passage through the tissues with minimal sawing, tissue drag and trauma. Good knot tie down / adjustability Reduced capillary action
- Guaranteed seal and product sterility

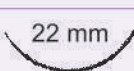

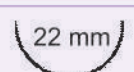

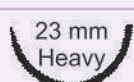

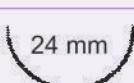

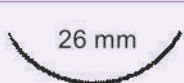

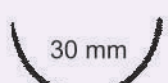

INDICATIONS

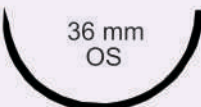

General soft tissue closing and/or ligation. Especially in
General surgery, Skin closure, Gastrointestinal surgery, Gynecology, Obstetrics
Plastic surgery, Urology, Ophthalmic surgery, Orthopedics

CONTRAINDICATIONS

- Cardiovascular surgery
- Neurosurgery
- Being absorbable not to use when an Extended wound support is required.

ORYL910/ORICRYL910 (Polyglactin 910) suture is most widely used braided and coated synthetic absorbable suture in the world. On account of its superior properties, this suture has replaced catgut sutures in most applications. Polyglactin 910 suture is a synthetic absorbable sterile surgical suture composed of a copolymer made from 90% Glycolide and 10% L-lactide.

Type	: Braided and coated multifilament
Material	: Polyglycolide (90%) - co-lactide (10%) synthetic absorbable braided surgical suture
Color	: Violet
Tissue reaction	: Minimal
Absorption	: The hydrolytic action by which the material is broken down results in total absorption in approximately 42 days. Approximately 50% of tensile strength remains after 7 days.
Tensile Strength	: 75% tensile strength is retained for 14 days and 50% till 21 days.
USP Range	: 8/0 – 2
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point

CHARACTERISTICS

- ☒ High tensile strength
- ☒ Synthetic
- ☒ Breaks down by hydrolysis
- ☒ Braided structure
- ☒ Coated multifilament
- ☒ Hermetically sealed packing

BENEFITS

- Excellent tissue support
- Minimal tissue reaction
- Predictable absorption rate
- Excellent handling properties, High flexibility, High tensile strength, Excellent knot security
- Soft passage through the tissues with minimal sawing, tissue drag and trauma. Good knot tie down / adjustability Reduced capillary action
- Guaranteed seal and product sterility

INDICATIONS

Superficial soft tissue closing of skin and mucosa only.

Especially in ·Plastic surgery, ·Obstetrics (Episiotomy repair), ·Gynecology, ·Urology (Circumcision)

·Ophthalmic surgery (Conjunctiva), ·Pediatric surgery.

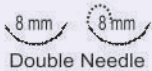

CONTRAINDICATIONS

- Cardiovascular surgery
- Neurosurgery
- Ligation
- When wound support for more than 7 days is required

ORYL910 PLUS/ORICRYL910 PLUS (Polyglactin 910-Antibacterial Triclosan Coated) suture is Composed of copolymer made from 90% Glycolide and 10% L-lactide with Triclosan coating – approved by WHO for SSI's (Surgical Site Infections) , It is effective against broad spectrum of pathogens including E.Coli, M R S A, It is Substantially persistent from antimicrobial activity due to its residual effect.

Type	: Braided and coated multifilament
Material	: Braided and coated polyglactin 910, coated with antibacterial agent Triclosan Coating of calcium stearate and polyglactin 910.
Color	: Violet
Tissue reaction	: Minimal
Absorption	: It is absorbed by hydrolysis within 56 – 70 days of implantation.
Tensile Strength	: Suture retains 60% of its initial tensile strength after 14 days.
USP Range	: 6/0 – 2
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point

CHARACTERISTICS

- ☑ High tensile strength
- ☑ Synthetic
- ☑ Breaks down by hydrolysis
- ☑ Braided structure
- ☑ Coated multifilament
- ☑ Hermetically sealed packing

BENEFITS

ORYL MONO / ORICRYL MONO (Poliglecaprone 25) suture is a monofilament synthetic absorbable surgical suture prepared from a copolymer of glycolide and epsilon-caprolactone. Poliglecaprone 25 copolymer has been found to be non antigenic, non pyrogenic and elicits only a slight tissue reaction during absorption

Type	: Monofilament
Material	: Poliglecaprone 25, a copolymer made of 75% glycolide and 25% Caprolactone
Color	: Violet
Tissue reaction	: Minimal
Absorption	: The hydrolytic action by which the material is broken down results in total absorption in approximately 90 to 120 days. Approximately 60% of tensile strength remains after 7 days.
Tensile Strength	: 50% tensile strength is retained for 14 days.
USP Range	: 6/0 – 2
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point
Packing	: In aluminium foil packages with or without needle

CHARACTERISTICS

- ☑ High tensile strength
- ☑ Synthetic
- ☑ Breaks down by hydrolysis
- ☑ Monofilament with microscopic uniform diameter
- ☑ Pliability and softness
- ☑ Hermetically sealed packing

BENEFITS

- Excellent tissue support
- Minimal tissue reaction
- Predictable absorption rate
- Soft passage through the tissues without sawing, tissue drag and trauma Absence of capillarity (no support of bacterial growth)
- Excellent knot tie down
- Good handling properties, Easy and secure knotting
- Guaranteed seal and product sterility

INDICATIONS

Superficial soft tissue and/or ligation especially in
General surgery, Skin closure, Plastic surgery,
Gastrointestinal surgery, Gynaecology, Urology

CONTRAINDICATIONS

- Cardiovascular surgery
- Neurosurgery
- Ophthalmic surgery
- Being absorbable not to use when an extended wound support is required

ORYL PD MONO / ORICRYL PDS MONO (Polydioxanone) monofilament synthetic absorbable suture is prepared from the polyester, poly (p-dioxanone).

Two important characteristics describe the in vivo performance of absorbable sutures first tensile strength retention and second the absorption rate (loss of mass). This synthetic absorbable suture has been formulated to minimize the variability of these characteristics and to provide wound support through an extended Healing period.

Type	: Monofilament
Material	: Polyester poly (p-dioxanone)
Color	: Violet
Tissue reaction	: Minimal
Absorption	: The hydrolytic action by which the material is broken down results in total absorption in approximately 180 to 210 days. Approximately 50% of tensile strength remains after 42 days.
Tensile Strength	: 50% tensile strength is retained for 14 days.
USP Range	: 6/0 – 2
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point
Packing	: In aluminium foil packages with or without needle

CHARACTERISTICS

- ☑ High tensile strength
- ☑ Synthetic
- ☑ Breaks down by hydrolysis
- ☑ Monofilament with microscopic uniform diameter
- ☑ Pliability and softness
- ☑ Hermetically sealed packing

BENEFITS

- Outstanding strength retention for extended wound support
- Minimal tissue reaction
- Predictable absorption rate
- Soft passage through the tissues without sawing, tissue drag and trauma Absence of capillarity (no support of bacterial growth)
- Excellent knot tie down
- Good handling properties, Easy and secure knotting
- Guaranteed seal and product sterility

INDICATIONS

General soft tissue closing especially in General surgery, Gastrointestinal surgery, Ophthalmic surgery, Orthopaedics, Abdominal wall closure, Gynaecology, Plastic surgery, Urology

CONTRAINDICATIONS

- Cardiovascular surgery
- Neurosurgery
- Prosthetic devices
- Being absorbable not to use when wound support for more than 6 weeks is required.

ORIGUT (Plain Catgut) is a fast absorbing surgical gut suture made from strand of collagenous material prepared from the sub mucosal layers of the small intestine of healthy sheep. Fast absorbing surgical gut sutures are sterile and elicit only a slight to minimal tissue reaction during absorption

Type	: Twisted multifilament with a monofilament appearance
Material	: None
Color	: Beige
Tissue reaction	: Moderate. Plain catgut enjoys lower tissue reaction
Absorption	: By phagocytosis. Complete mass absorption in approximately 65 days. Approximately 50% of tensile strength remains after 7 days. When used in infected tissues or in tissues with increased levels of proteolytic enzymes (stomach, cervix, and vagina) it is more quickly absorbed.
Tensile Strength	: Tensile strength is retained for 7 - 14 days.
USP Range	: 5/0 – 3
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point
Packing	: In aluminium foil packages with or without needle

CHARACTERISTICS

- ☑ High tensile strength
- ☑ Absorption by phagocytosis
- ☑ Twisted structure
- ☑ Uniform diameter by centerless polishing (monofilament appearance)
- ☑ Hermetically sealed packing

BENEFITS

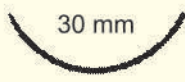

- Excellent tissue support
- Uniform absorption
- Excellent handling properties, High flexibility
- High tensile strength, Excellent knot security
- Soft passage through the tissues without sawing, tissue drag and trauma.
- Excellent knot tie down
- Guaranteed seal and product sterility

INDICATIONS

General soft tissue closing and/or ligation especially in General surgery, Gastrointestinal surgery, Gynaecology, Obstetrics, Urology, Ophthalmic surgery

CONTRAINDICATIONS

- Cardiovascular surgery, Neurosurgery
- Being absorbable not to use when an extended wound support is required.
- Caution in patients with delayed wound healing (e.g. compromised immune system).
- In the region of infected wounds known sensitivities or allergies to Collagen

ORICHROME (Chromic Catgut) is an absorbable, sterile surgical suture composed of purified connective tissue (mostly collagen)

Derived from the sub mucosal fibrous layer of healthy sheep intestines. Strands of purified collagen taken from the Serosal layer of selected bovines, tanned with chrome salts to provide Greater resistance to absorption.

Type	: Twisted multifilament with a monofilament appearance
Material	: None
Color	: Dark brown
Tissue reaction	: Moderate.
Absorption	: By phagocytosis. The rate of absorption is slowed down by chromizing. Complete mass absorption in approximately 90 days. Approximately 50% of tensile strength remains after 14 days. When used in infected tissues or in tissues with increased levels of proteolytic Enzymes (stomach, cervix, vagina) it is more quickly absorbed.
Tensile Strength	: Tensile strength is retained for 14 - 21 days.
USP Range	: 5/0 – 3
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point
Packing	: In aluminium foil packages with or without needle

CHARACTERISTICS

- ☑ High tensile strength
- ☑ Absorption by phagocytosis
- ☑ Twisted structure
- ☑ Uniform diameter by centerless polishing (monofilament appearance)
- ☑ Hermetically sealed packing

BENEFITS

- Excellent tissue support
- Uniform absorption
- Excellent handling properties, High flexibility
High tensile strength, Excellent knot security
- Soft passage through the tissues without sawing, tissue drag and trauma.
Excellent knot tie down
- Guaranteed seal and product sterility

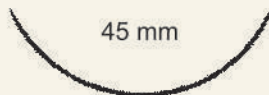

INDICATIONS

Synthetic Non Absorbable Surgical Suture

SYNTHALIN / ORILENE (Polypropylene Sutures) (clear or pigmented) are non-absorbable, sterile surgical suture composed of an isotactic crystalline stereoisomer of polypropylene, a synthetic linear polyolefin. The suture is pigment blue to enhance visibility.

SYNTHALIN Polypropylene Sutures are indicated for use in general soft tissue approximating and/or ligation, including use in cardiovascular, ophthalmic procedures, and neurological procedures.

Type	: Monofilament
Material	: Polypropylene, a polymer of propylene
Color	: Blue
Tissue reaction	: Minimal
Absorption	: Non absorbable
Tensile Strength	: Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
USP Range	: 10/0 – 2
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point
Packing	: In aluminium foil packages/ Medical Grade ETO Pouches with or without needle

CHARACTERISTICS

- ☑ High tensile strength, non absorbable
- ☑ Resistance to repeated bending
- ☑ Synthetic
- ☑ Monofilament with microscopic Uniform diameter
- ☑ Pliability and softness
- ☑ Hermetically sealed packing

BENEFITS

- Excellent and permanent tissue support
- Use in cardiovascular surgery (heart prosthesis or vascular anastomosis)
- Minimal tissue reaction
- Soft passage through the tissues without sawing, tissue drag and trauma.
Absence of capillarity (no support of bacterial growth)
Excellent knot tie down
- Good handling properties, Easy and secure knotting
- Guaranteed seal and product sterility

INDICATIONS

General soft tissue closing and/or ligation especially in General surgery, Gastrointestinal surgery, Gynaecology, Obstetrics, Urology, Ophthalmic surgery

CONTRAINDICATIONS

- Cardiovascular surgery, Neurosurgery
- Caution in patients with delayed wound healing (e.g. compromised immune system).
- In the region of infected wounds Known sensitivities or allergies to Polypropylene.

DURASIL / ORISILK (Black Braided Silk Suture) is a non absorbable, sterile, surgical suture composed of an organic protein called fibroin. This protein is derived from the domesticated species *Bombyx mori* (B. More) of the family Bombycidae. These are processed to remove the natural waxes and gums. DURASIL suture is dyed black and coated with a special wax mixture.

Durasil is indicated for use in general soft tissue approximation and/or ligation, including use in Cardiovascular, ophthalmic and neurological procedures.

Type	: Black Braided multifilament.
Material	: Braided fibres from the cocoon of the silkworm coated with Wax silicone.
Color	: Black
Tissue reaction	: Moderate
Absorption	: Silk suture elicits an initial inflammatory reaction in tissues, which is followed by Gradual encapsulation of the suture by fibrous connective tissues.
Tensile Strength	: Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
USP Range	: 7/0 – 4
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point
Packing	: In aluminium foil packages/ Medical Grade ETO Pouches with or without needle

CHARACTERISTICS

- | | |
|---|--|
| <input checked="" type="checkbox"/> High tensile strength, non absorbable | ● Good and extended tissue support for up to 3 month |
| <input checked="" type="checkbox"/> Braided or twisted structure | ● Excellent handling properties, High flexibility

DURASIL / ORISILK (Virgin Silk) suture is a non absorbable, sterile, surgical Made from filaments of silk fibre which are held together by natural gum secreted by the silk worm.

Durasil is indicated for use in general soft tissue approximation and/or ligation, including use in Cardiovascular, ophthalmic and neurological procedures.

Type	: Twisted multifilament.
Material	: Twisted fibres from the cocoon of the silkworm
Color	: Blue
Tissue reaction	: Moderate
Absorption	: Silk suture elicits an initial inflammatory reaction in tissues, which is followed by Gradual encapsulation of the suture by fibrous connective tissues.
Tensile Strength	: Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
USP Range	: 10-0 to 8-0
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point
Packing	: In aluminium foil packages/ Medical Grade ETO Pouches with or without needle

CHARACTERISTICS

- ☒ High tensile strength, non absorbable
- ☒ Braided or twisted structure
- ☒ Coated multifilament
- ☒ Hermetically sealed packing

BENEFITS

- Good and extended tissue support for up to 3 month
- Excellent handling properties, High flexibility
High tensile strength, Excellent knot security
- Soft passage through the tissues with minimal sawing, tissue drag and trauma. Good knot tie down / adjustability
Reduced capillary action
- Guaranteed seal and product sterility

INDICATIONS

General soft tissue closing and/or ligation especially in General surgery, Skin closure, Ophthalmic surgery
Oral surgery, Gastrointestinal surgery, Gynaecology, Obstetrics.

CONTRAINDICATIONS

- Urinary tract, Biliary tract
- Known allergies or sensitivities to silk

NEOBOND (Polyester Suture) is a non absorbable, braided, sterile, surgical suture composed of Poly (ethylene terephthalate). It is prepared from fibers of high molecular weight, long-chain, linear polyesters having recurrent aromatic rings as an integral component. The suture is uniformly coated with polybutylate or poly {oxy-1, 4 butanediyl oxy (1, 6-dioxo-1, 6 hexanediyl)}. The highly adherent coating is a relatively nonreactive non absorbable compound which acts as a lubricant to mechanically improve the physical properties of the uncoated suture by improving handling qualities as contrasted to the braided, uncoated fiber. NEOBOND Suture is braided for optimal handling properties, and dyed green for enhanced visibility.

Type	: Braided multifilament
Material	: Polyester - a polymer of polyethylene terephthalate coated with Silicone, Teflon
Color	: Green
Tissue reaction	: Minimal
Absorption	: Non absorbable, gradually encapsulated by connective tissue
Tensile Strength	: Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
USP Range	: 5/0 – 5
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point
Packing	: In aluminium foil packages/ Medical Grade ETO Pouches with or without needle

CHARACTERISTICS

- ☑ Unsurpassed tensile strength, non absorbable
- ☑ Resistance to repeated bending
- ☑ Synthetic
- ☑ Braided structure
- ☑ Coated multifilament
- ☑ Hermetically sealed packing

BENEFITS

- Excellent and permanent tissue support
- Use in cardiovascular surgery (heart prosthesis)
- Minimal tissue reaction
- Excellent handling properties, High flexibility, High tensile strength. Excellent knot security
- Soft passage through the tissues with minimal sawing, tissue drag and trauma. Good knot tie down / adjustability. Reduced capillary action
- Guaranteed seal and product sterility

INDICATIONS

General soft tissue closing and/or ligation especially in General surgery, Skin closure, Ophthalmic surgery, Oral surgery, Gastrointestinal surgery, Gynaecology, Obstetrics.

Synthetic Non Absorbable Surgical Suture

ORLON (Nylon/Polyamide) Suture is non absorbable, sterile surgical monofilament suture composed of the long-chain aliphatic polymers Nylon 6 and Nylon 6, 6. This Suture is dyed black / blue or green to enhance visibility in tissue

It is mostly used in ophthalmic and neurological procedures

Type	: Monofilament
Material	: Extrusion of polyamide 6.0 or 6.6
Color	: Black / Blue
Tissue reaction	: Minimal
Absorption	: Non absorbable, gradually encapsulated by connective tissue. The thread mass Diminishes, approximately 10% a year by rupture of chemical links (hydrolytic action).
Tensile Strength	: Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
USP Range	: 10/0 – 2
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point

CHARACTERISTICS

- ☑ High tensile strength, non absorbable
- ☑ Synthetic
- ☑ Monofilament with microscopic uniform diameter
- ☑ Pliability and softness
- ☑ Hermetically sealed packing

BENEFITS

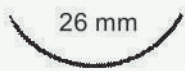

- Excellent and permanent tissue support
- Minimal tissue reaction
- Soft passage through the tissues without sawing, tissue drag and trauma. Absence of capillarity (no support of bacterial growth)
- Excellent knot tie down
- Good handling properties
- Easy and secure knotting
- Guaranteed seal and product sterility

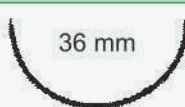

INDICATIONS

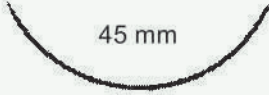

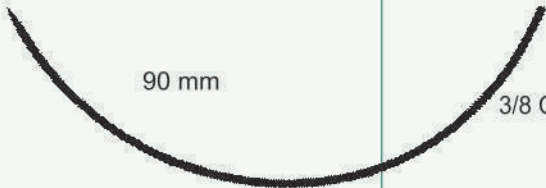

General soft tissue closing and/or ligation

Blue :- especially in Skin closure, General surgery, Plastic surgery, Gastrointestinal surgery, Gynaecology
Obstetrics, Orthopaedics

Black :- especially in Plastic surgery, Ophthalmic surgery

Non Absorbable Surgical Suture

ORISTEEL (Surgical stainless steel) suture is a non absorbable, sterile surgical suture composed of 316L stainless steel conforming to ASTM Standard F138 Grade 2 Stainless Steel bar and wire for surgical implants. Steel sutures meet all requirements established by the United States Pharmacopeia (USP) and for non absorbable surgical sutures. The sutures are available as a monofilament suture.

Type	: Monofilament
Material	: Iron, nickel and chromium alloy
Color	: Metal
Tissue reaction	: Minimal
Absorption	: Non absorbable
Tensile Strength	: Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
USP Range	: 7 - 5/0
Sterilization	: EO (Ethylene Oxide)
Needle Type	: Round bodied, cutting edge, taper point, straight, blunt point
Packing	: In Medical Grade ETO Pouches with needle

CHARACTERISTICS

- ☑ High tensile strength, non absorbable
- ☑ Synthetic
- ☑ Ductile and malleable
- ☑ Monofilament with microscopic uniform diameter
- ☑ Hermetically sealed packing

BENEFITS

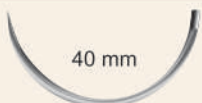

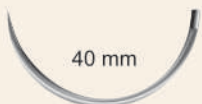

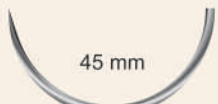

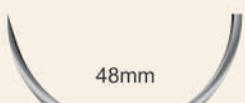

- Excellent and permanent tissue support
- Minimal tissue reaction
- Good handling properties
- Soft passage through the tissues without sawing, tissue drag and trauma
- Absence of capillarity (no support of bacterial growth)
- Excellent knot tie down
- Guaranteed seal and product sterility

INDICATIONS

Closure of sternum, Orthopaedics, Abdominal wall closure and hernia repair

CONTRAINDICATIONS

Known sensitivities or allergies to stainless or metals such as chromium and nickel

Polypropylene Mesh - SYNTHALIN MESH / ORILENE MESH is constructed of Knitted filament of extruded polypropylene identical in composition.

Polypropylene filament undergoes a process of knitting which interlinks each junction of the fibre. We use special laser Cutting for our Mesh to have The Construction permits the mesh to be cut into any desired shape or size. This bi-directional elastic property allows adaptation to various stresses encountered in body.

Polypropylene Mesh is available in various thicknesses, dimensions, knitting patterns, shapes, sling, pore sizes and pre-cut sizes. Our products are tested and have excellent burst strength. We can manufacture any type and shape of Surgical Mesh as per our customers requirement. Our Surgical meshes are not only smooth and strong, but they are also thin and flexible. Our Hernia Mesh can be used in both tension-free and laparoscopic tension-free hernia repairs, it provides support for weak tissues.

We can even supply mesh in rolls with a maximum width of 32 cm and a maximum length of 25 meters.

Material	: Monofilament Polypropylene (Undyed)
Absorption	: Non absorbable
Shelf Life	: 5 Years
Product Characteristics	: Light weight construction because of which less foreign mass in the body & flexible scar tissue. Macro porous for high visibility and colonization
Uses	: Mesh can be used for surgical procedures and hernia procedures, Urinary incontinence sling, Pelvic floor reconstruction, tissue carrier, vaginal prolapse suspension
Packaging	: Double packed in Tyvek and Medical grade pouch for Sterilized Mesh Packed in polyethene bags for Non-Sterile Mesh ; Bulk Packing
Sterilization	: EO Sterilisation
Types	: R1, R2, R3, R4, U1, U2, U3, U4.

Bonewax – ORIWAX is a mixture of beeswax, paraffin, and isopropyl palmitate, a wax-softening agent. It is opaque and has a waxy odour. It's indicated for use in the control of bleeding from bone surfaces during surgical procedures.

It achieves local hemostasis of bone by acting as a mechanical (tamponade) barrier. It does not act biochemically and is non-absorb-able. It is available sterile in individual foil envelopes, each containing 2.5 g and packed in an individually sealed overwrap. It is sterilized by Gamma radiation.

Packets should be opened just prior to use to minimize the possibility of contamination and excessive drying and should be used immediately. The Surgical Wax should not be re-sterilized or subjected to excessive heat. It is opaque and has a waxy odour. It's indicated for use in the control of bleeding from bone surfaces and use in Wound Closure.

Material	: Beeswax, Paraffin & Isopropyl Palmitate
Color	: Opaque
Absorption	: Minimally Resorbable
Sterilization	: Gamma Radiation
Shelf Life	: 5 Years
Product Characteristics	: Helps local haemostasis by functioning like a mechanical barrier & is biochemically inert.
Packaging	: In aluminium foil packages
Code No	: OS 810 (Sterilized Bone Wax 2.5g)
Uses	: Orthopaedic Surgery, Neurosurgery, Thoracic surgery (sternum, ribs), Traumatology, Maxillofacial surgery (facial bones), Thoracic surgery, Dental, oral and maxillary-face surgery.

Recommendations and precautions

Bone wax has no intrinsic pharmacological properties. The haemostatic effect is mechanically produced by occlusion of the intraosseous blood vessels.

- Medical and hospital use only.
- Do not apply bone wax directly to the central nervous system.
- Do not use bone wax in patients with a known allergy to beeswax.
- Discard products that have been opened and not used.
- Do not use the product with the validity term expired.
- Bone wax should not be applied to infected areas since it can enhance the infection.
- Product should be open inside OT area and under sterile conditions.
- Bone wax is for single use: its reuse can trigger an infection in the patient and/or in the user and deterioration in the functionality of the product.

Checking the diameter & uniformity of sutures

Needle crimping on a pneumatically operated crimping machine where eyeless needles are attached to individual suture strands

Needle inspection under illuminated magnifying glass
Checking minute defects

Microbiology Laboratory-Inhouse Sterility Testing

Quality Assurance

Our Quality Assurance Laboratory adopts modern analytical techniques. Rigorous control and strict adherence to quality specifications have enabled us to ensure guaranteed reliability of our products. Raw materials used in manufacturing go through strict testing procedures to produce monitored continuously and post marketing surveillance is conducted on random batches to assess the performance of the products after dispatch.
